DETAILED ACTION

Claim Objections

Claim 1 is objected to because of the following informalities: the phrase "(or two of the doors)" should be deleted. Appropriate correction is required.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1, 2, 8, 9 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Patterson (U.S. Patent No. 6,026,802) in view of Scherrer (U.S. Patent No. 6,886,713). In Figure 2, Patterson discloses an outdoor appliance

Art Unit: 3743

enclosure which is capable of functioning as a stowage box for an emergency breathing mask for the flight crew of an airplane. The box comprises a frame forming a receptacle which is capable of receiving the mask. The frame has an open face (22) through which the mask is inserted and extracted. At least two doors closing the open face of the frame.

Thus, Patterson discloses the claimed invention with the exception of at least in part, the two doors are hinged about two hinge axes situated respectively on two adjacent edges of the open face and substantially perpendicular to each other. However, Scherrer, which also relates to a storage compartment, teaches that it is known to build a storage compartment having dual axis so that the first axis is oriented substantially perpendicular to the second axis (Scherrer, Abstract and Fig. 1). Thus, it would have been obvious to one skilled in the art to incorporate the dual axis of Scherrer into the enclosure of Patterson for the purpose of allowing convenient access to the contents of the enclosure of Patterson as taught by Scherrer (Scherrer, col. 1, lines 33-35).

Patterson also discloses having two doors each substantially in the form of a triangular plate, with a vertex having two sides forming a right angle, one of these sides being hinged about one of the two hinge axes. Patterson further teaches the concept of having an opening adapted to permit the appliance (i.e., mask and its lug handles) to extend there-through.

Allowable Subject Matter

Claims 3-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
